## Sorting Words by Syllables

Cut out the numbers and the pictures and help your child sort the pictures underneath the number that's the same as the number of syllables in the word. You could clap out the syllables together if they get stuck.

It's probably best to sort each category separately at first. Once your child grows in confidence, you could mix up the pictures from each category and sort them all together.

You could also use other objects such as toy animals or food alongside or instead of the pictures cards.
